

Conclusion

Congratulations

- You are a “noob”
- Learning the basics of any programming language is important and empowering
- Variables, arrays, functions, looping, these are concepts that repeat everywhere

Sever-side Processing

- Even though we talked about forms, be aware that true form processing requires the ability to write server-side code
- “Full stack” or “back-end” programming courses can help you with this

What next?

- Continue to practice your skills
 - You will “lose it” if you don’t “use it”
 - You are ready to join a Meet Up, or (after a little more practice) offer your skills as a TA at workshops
- Consider learning about jQuery
- Learn more about Responsive Design by joining the next course in this Specialization

Thank you!
