

Breakpoints

Breakpoints

- What are they?
- Sizes that define a change in your site layout or content.
- Used to provide best possible experience for users based on device information.

What does “trigger” mean

- People may use the phrase “breakpoints trigger changes”.
- To be honest, most people don’t resize their window.
- So I will use breakpoints to refer to which rules are applied.

Determining the Breakpoints

- Breakpoints should correspond to:
 - devices and/or
 - content

Screen sizes

- iPhone 4 (320px, 480px)
- iPhone 5 (320px, 568px)
- iPhone 6 (375px, 667px)
- iPhone 6+ (414px, 736px)
- Galaxy S3/S4 (320px, 640px)
- Galaxy S5 (360px, 640px)

Mobile first

- What does this mean?
 - You shouldn't see breakpoints for small screens. The default styling already covers that.
 - You should have min-width instead of max-width
